ABOUT BOK MODERN

We are a team of architects, industrial designers, engineers and contractors. We understand your vision and facilitate your project from concept to delivery.

We provide elegant, structurally integrated panel solutions for balcony guardrails, fences, rain screens, canopies, parking garage screens, green screens and much more.

WHY BOK MODERN RAINSCREENS?

BOK Modern's patented Rainscreen system is like no other on the market. Our Rainscreen is a non-flammable, solid aluminum, single skin panel; not a composite. The folded crisp edge result in a super flat face. It can be solid, bas-relief, or custom laser cut to your specifictions in aluminum or weathering steel. We can also custom form to a large variety of 3-dimensional shapes. We also offer a 12 and 14 gauge weathering steel option as well as stainless steel in a variety of surface treatments.

Standard finishes on aluminum include Kynar, in unlimited colors, powder coating and anodizing. We offer specialty coatings as well.

Our patented tab and slot system has an integrated spacing feature to space the panels without using shims to ensure a quick and easy install. When installed directly over a suitable substrate (i.e. plywood), our unitized panel system generally requires no additional furring or other secondary support members. Reducing labor costs in the field means a higher quality of panel for your project budget. When installed over insulation or other such substrate, our panels are attached directly to standard 'z's' or hat channels.

All of our panels are precision manufactured to your specifications for your specific job. All of your panels are modeled 3-dimensionally in Solidworks and fitted before fabrication. All panels are crated in solid wood crates and each panel has laser cut part numbers to insure quick identification during install.

BŌK provides in-house engineering for our panels with loads for your Engineer of Record to provide the appropriate backing structure.

PATENT# 9.903.122 -2018

INTRODUCTION

RAINSCREEN

TECHNICAL INFORMATION

Our panels are a closed joint rain screening system with dry (nonsealed) joints. The panels and attaching hardware are provided by BŌK Modern. Appropriate air & water barriers to be provided by others. Recommendations include:

Liquid applied:

GE Elemax 2600 (in service temperature up to 300° F) Cat5 (in service temperature up to 300° F) Dow Defendair 200 (in service temperature up to 300° F) GCP (Perm-A-Barrier VPL max in service temp of 160° F) Soprema (Sopraseal LM)

Sheet applied options:

GCP (Perm-A-Barrier High Temperature in-service temperature up to 180° F)

Soprema (Sopraseal Stick VP in-service temperature up to 185° F) Vaproshield Revealshield SA is a black UV stable self-adhered membrane that can be used in open jointed rainscreen applications. In service temperature up to 225° F.

Aluminum panel gauges include .060. 080 and .125. See the following tables for pre-engineered panels sizing

Our system minimizes thermally broken z-girts (if required). Ask us about our soon to be released integrated furring system for assemblies incorporating exterior insulation.

Our panels are typically attached with #12 sheet metal screws 16" on center typically on the long sides. Additional screws may be required in high wind loads and/or large panels.

Matching trim pieces available upon request.

2D PATTERNS

With a UV stable air and moisture barrier, our panels can be custom perforated to your specifications.
